

Supplemental implementation summary - May 20, 2026

Credit Monkey Advanced SEO Expansion

This supplemental report documents the final Do all phase completed after the original technical SEO implementation. The phase expands topical authority, improves clean static URL support for GitHub Pages, adds interactive credit repair tools, strengthens local and comparison intent coverage, and packages off-site execution assets for the business team.

Validation Area	Result
Static HTML crawl	210 HTML files scanned; 0 broken internal links; 0 SEO tag issues; 0 image issues
Browser smoke test	Clean directory URLs, hub pages, local pages, resource pages, and calculators verified
Lighthouse homepage	Performance 83, Accessibility 100, Best Practices 100, SEO 100
Core Web Vitals lab signals	FCP 3.1s, LCP 3.8s, CLS 0.002, TBT 20ms

New SEO Assets Implemented

Cluster	Implemented Pages / Assets
Problem-intent resources	Charge-off removal; repossession removal; hard inquiry removal; medical collections removal; debt validation help; mortgage credit repair; divorce credit repair; auto loan credit repair
Comparison and buyer intent	Best credit repair services California; best Los Angeles companies; Credit Monkey vs Lexington Law; Credit Monkey vs Credit Saint; pricing guide; DIY vs company
Interactive tools	Credit utilization calculator; dispute timeline calculator; credit repair checklist; dispute document checklist; dispute eligibility decision helper
Local/off-site support	Google Business Profile checklist; citation audit checklist; backlink outreach templates; off-site action plan; citation tracker CSV

Technical SEO Hardening

- Generated directory index versions for canonical pages so extensionless URLs work reliably on static GitHub Pages hosting.
- Regenerated sitemap.xml to include the expanded indexable content set without duplicate directory index entries.
- Refreshed static footer links across the site so crawlers can discover California pages, issue pages, comparison pages, and tools without JavaScript.
- Updated shared JavaScript navigation/footer logic to resolve correct paths on root files, nested .html files, and clean directory URLs.
- Added calculator behavior for utilization, dispute timeline planning, and dispute review guidance.

Ranking Opportunity Map

Intent	Primary Pages
California commercial	/states/california; /comparisons/best-credit-repair-services-california; city landing pages
Los Angeles commercial	/locations/los-angeles; /comparisons/best-credit-repair-companies-los-angeles

Intent	Primary Pages
Issue repair	/resources/charge-off-removal; /resources/repossession-removal; /resources/medical-collections-removal; /resources/hard-inquiry-removal
Credit readiness	/tools/credit-utilization-calculator; /resources/mortgage-credit-repair; /resources/auto-loan-credit-repair
Buyer comparison	/comparisons/credit-monkey-vs-lexington-law; /comparisons/credit-monkey-vs-credit-saint; /comparisons/diy-credit-repair-vs-credit-repair-company

Execution Notes

The remaining SEO work that cannot be executed from code requires verified business access: Google Business Profile updates, citation submissions, real customer review workflows, partner outreach, and backlink acquisition. The repository now includes ready-to-use execution documents under output/seo/ for those steps.

Next 90 Days

Timeframe	Recommended Work
Weeks 1-2	Publish/deploy frontend; submit sitemap in Google Search Console; verify index coverage; update GBP services and photos.
Weeks 3-6	Execute citation cleanup and outreach to mortgage, real estate, auto finance, and California resource partners.
Weeks 7-12	Refresh pages with Search Console query data; add real testimonials or reviews where compliant; expand blog support around pages gaining impressions.
